

National Data Center Security Solutions

Data centers require consistent, reliable security to support daily operations and long-term growth. Allied Universal® has worked on more than 50M square feet of data center projects since 2014, across remote and multi-site environments. Our teams are trained to work in mission-critical settings and are supported by centralized security systems. We focus on helping clients manage risk, maintain visibility across sites, and support continuity through integrated services and technology.

Integrated On-Site Personnel

Our data center-trained personnel integrate with facility staff, following site-specific protocols while helping to maintain consistent standards across remote and multi-complex environments. Backed by a centralized PMO, we bring specialized expertise and documented procedures that allow us to scale with our clients' growth.

Real-Time Intelligence

We provide on-site teams with real-time data through our integrated technology platforms. HELIAUS® supports guard responsiveness by surfacing relevant site intelligence while GSOC monitoring provides 24/7 visibility, enabling faster incident response and supporting post-event analysis.

Scalable Service Models

We deliver consistent, scalable service programs across hyperscale, colocation, and edge facilities. Our teams lead standardized rollouts, conduct centralized training, and embed directly into client operations to help ensure reliable performance in evolving environments.

Core Capabilities

Integrated Security Solutions: Unified guarding, security integrator, and visitor management tailored for high-risk environments.

Embedded Security Staffing: On-site professionals trained in mission-critical protocols and supported by national PMO.

Scalable Technology Deployment: Standardized system rollouts across multi-site portfolios — supporting speed, scale, and consistency.

AI-Powered Video & Analytics: Smart surveillance with facial recognition, license plate reading, and perimeter alerts.

GSOC Integration & 24/7 Monitoring: Real-time threat detection and incident response via centralized operations centers.

Risk & Asset Management: Ongoing auditing, asset tracking, penetration testing, and SLA reporting tied to business continuity goals.

Adaptable Service Models: From managed services to embedded teams, programs scale with client security maturity.
