

HELIAUS® Gov Mission-Ready. Compliance-Aligned.

HELIAUS® Gov is the government-ready deployment of Allied Universal's award-winning HELIAUS platform — an AI-powered workforce-management system purpose-built for security operations. Built inside AWS GovCloud (US) and administered exclusively by U.S. Persons, HELIAUS Gov delivers the full, uncompromised capabilities and enterprise-grade security of the HELIAUS platform — operated within a dedicated compliance environment designed to satisfy U.S. government security and regulatory requirements, including NIST 800-171 and FedRAMP Moderate Equivalency as defined by the U.S. Department of Defense.¹

By meeting these standards out-of-the-box, HELIAUS Gov helps federal and defense agencies accelerate Authority-to-Operate (ATO) approvals, reduce compliance overhead, and keep focus on mission execution.

Built for the Mission

HELIAUS Gov provides the same trusted HELIAUS capabilities — predictive analytics, digital post orders, geofenced activity tracking, and AI-driven insights — in a compliance-segregated environment engineered for federal and defense operations.

- > **Dedicated Compliance Environment:** Deployed entirely in AWS GovCloud (US) with no crossover to commercial infrastructure.
- > **U.S. Persons-Only Administration:** Access and support restricted to U.S. Persons with verified background checks.
- > **Data Sovereignty:** All data processed and stored exclusively within U.S. borders.
- > **Zero-Trust Controls:** Layered authentication, least-privilege access, and continuous verification consistent with Allied Universal's enterprise security standards.

HELIAUS Gov is not a different system — it's the same trusted HELIAUS platform, operated in a U.S. government-compliant environment.

Compliance & Assurance

Built on the same hardened security foundation as the enterprise HELIAUS platform, HELIAUS Gov is architected to align with NIST SP 800-171 and to meet FedRAMP Moderate Equivalency, enabling rapid Authority to Operate (ATO) approvals and simplified handling of Controlled Unclassified Information (CUI).

Key Practices Include:

- > End-to-end encryption using FIPS 140-2 validated cryptographic modules.
- > Continuous diagnostics, real-time anomaly detection, and centralized audit logging through a FedRAMP-aligned monitoring framework.
- > Documented incident-response playbooks for triage, containment, and reporting in accordance with government requirements.
- > Verified supply-chain risk management and continuous system-integrity validation.

¹ As defined by the U.S. Department of Defense memorandum on FedRAMP Moderate Equivalency for Cloud Service Offerings (David W. McKeown, Deputy DoD CIO for Cybersecurity, December 21, 2023).

Operational Impact

HELIAUS Gov enables federal and defense organizations to realize the full power of HELIAUS® within a U.S. government-compliant environment. It brings post orders to life — turning static instructions into intelligent, adaptive workflows that guide, verify, and improve performance in real-time.

- > **Mission Assurance:** Proven HELIAUS resilience helps ensure continuity of operations across secure facilities and demanding environments.
- > **Dynamic Post Execution:** Digital post orders and AI-driven insights help security professionals anticipate risks, document actions, and demonstrate compliance.
- > **Real-Time Accountability:** Every patrol, report, and event is time-stamped, validated, auditable, and providing transparent operational oversight.
- > **Trusted Data Integrity:** Verifiable situational awareness within a compliance-aligned architecture.

There for You® — Securely

HELIAUS Gov delivers the same trusted HELIAUS experience — secure, intelligent, and proven — within a U.S. government-compliant environment, combining Allied Universal's operational excellence with enterprise-grade security trusted by clients around the world.
