

Real-Time Threat Intelligence and Situational Awareness Solutions

Protect assets effectively with cloud-based, flexible and scalable platforms that integrate seamlessly into your security program for greater situational awareness.

In today's complex world, real-time situational awareness is critical for security professionals to make decisions regarding the security of assets and operational continuity on a daily basis. Allied Universal's Global Security Operations Center as a Service (GSOCaaS) offers the latest in threat intelligence capabilities and response tools, Web and social media monitoring, mass notification communications and workforce management platforms to provide additional layers of situational awareness and responsiveness to your security operations.

Affordable and easy to deploy, these common operating platforms provide options for your current and future needs. Technology can be integrated into your security programs gradually or as a full capacity GSOC ecosystem.

GSOC and GSOCaaS Capabilities

An organization's human assets and resources are as critical to enhancing situational awareness as the tools and technology in a GSOC. Threat intelligence is made actionable through human analysis, reporting and communication of critical events, and management of all physical and operational information work flow.

Through Allied Universal's Monitoring and Response Center (MaRC), a focused recruiting operation provides specialized sourcing of GSOC operators and analysts that can either be dedicated at your location, or reside inside the MaRC as a redundant capability or as a shared resource.

The MaRC provides a managed services model focused on pre-defined customer physical and/or operational requirements, information analysis, alarm or event response and critical incident reporting.

- Dedicated client dashboards for asset types, locations and business risk profile
- Emergency incident support with dedicated customizable and scalable services, based upon needs
- Daily briefing report
- Information management and event response of physical security information (PSIM) and operations information (OPSIM) products and technologies
- Real-time alerting

Service Options

- Risk mitigation-focused support
- Incident and intelligence aggregation, analysis and reporting
- Special event and incident analysis, root cause, special findings and recommendation reporting

Integrated GSOC Platforms

- Situational awareness and threat intelligence common operating pictures
- Web and social media monitoring (common, deep and dark)
- Community crowd sourcing, proactive and preventive awareness communication
- GSOC SOP and crisis management digitized policies, procedures and controls
