

Pioneering Data-Driven Situational Awareness

Understand the threats impacting your organization to make better informed response decisions faster, with real-time 24/7/365 global monitoring and alerting.

With a “single pane of glass” common operating picture that combines multiple data feeds into one GSOC (Global Security Operating Center) interface, the PlanetRisk SaaS (Software as a Service) platform monitors, analyzes and helps mitigate potential threats to employees, assets and supply chains in real time. In partnership with Allied Universal’s GSOC as a Service program, PlanetRisk transforms vast amounts of complex data into immediate actionable intelligence, providing alerts and notifications when an event or incident occurs that may potentially impact your organization.

A pioneer in big data analytics, PlanetRisk also identifies indicators, trends and warnings to provide long-term insight to threats and risks, for a better-informed response plan. PlanetRisk’s unique all-hazards approach to situational awareness combines big data with geospatial intelligence, position and contextual awareness to recognize hidden patterns, detect anomalies and forecast future conditions on a local, national or global scale.

Key Features

- Flexible, cloud-based platform
- Custom dashboard accessible via Web and mobile devices
- Robust communications
- Advanced analytics
- Big data engineering
- Data sourcing, integration and management
- Enterprise risk modeling
- Geospatial business intelligence
- Intelligence analysis
- Logistics/supply chain management
- Modeling and simulation
- Operations research
- Social network analysis

Key Benefits

- Force-multiply security operations
- Guard against regulatory and legislative risk
- Communicate with stakeholders and assets in the field
- Track and protect VIPs and travelers
- Identify threats and opportunities
- Accelerate situational awareness anywhere in the world
- Minimize risk and focus security resources on operational efficiencies
